About Us

Concept Elevator Group was founded in 2003 in Miami, Florida.

Our vision was to create a dynamic company that would be the best manufacturer of elevator cabs and entrances while maintaining the best lead times in the industry.

Since our company was founded on quality and customer service, one of our first milestones was the completion of our ISO 9001-2008 certification. In addition to quality, our vision includes product innovation.

We have the ability to design products that not only meet the design intent, but products that minimize installation time and make our customers more competitive in the marketplace.

Concept Elevator

The company started with only 8,300 square feet of manufacturing space. Since then our products and customer service have grown our facility to over 57,000 and still growing.

Our growth was based on providing a quality product that exceeds the needs of our customers and the ability to stand behind it with unsurpassed customer service.

Our expansive range of products include applications of all types to meet various needs. We manufacture products that include the simplest wood core elevator cab as well as high spec custom finishes for high profile projects.

We have provided material for some of the most demanding projects including hospitals, major airports, museums and transit systems.

We can provide UL certified entrances that range from the smallest entrances permitted by code to the some of the most elaborate entrances imaginable with a vast array of finishes and materials.

We differentiate ourselves in many ways. In addition to our manufacturing capabilities, we have the ability to engineer some of the most challenging designs and concepts.

We have engineered and designed a wide variety of custom cabs and entrances from small glass cabs for homes to massive enclosures over 20 feet tall and 20 feet wide.

We design products and installation documentation to take the guesswork out of assembling our products.

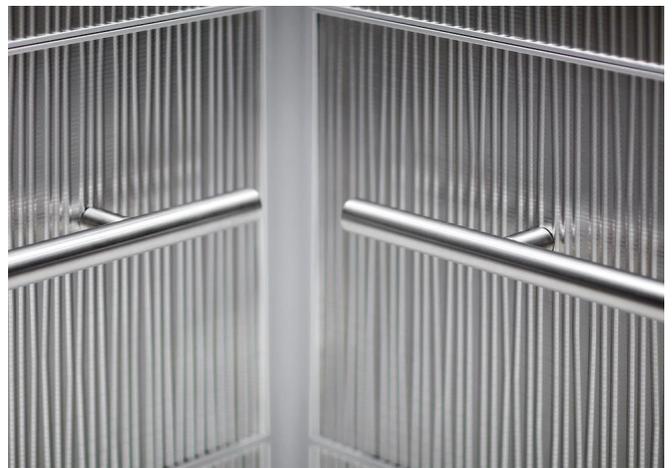

We strive for continuous improvement, committed quality, and innovative conceptual products based on our customer's needs.

Innovative products and designs allow us to maintain one of the lowest labor installation rates in the industry.

Our Portfolio

Ceilings

Concept takes creativity to new heights with innovative ceiling designs.

The team at Concept Elevator Group is consistently creating and simultaneously improving daily designs, to achieve better aesthetics in your everyday elevators. These specialty ceilings include metal drop or suspended ceiling panels which both display an illusion of a high ceiling while down lights give depth to the passenger's perception.

Suspended aluminum frames are typically used for light weight cabs. Our aluminum egg crate or Lexan thermoclear diffusers installed with your choice of fluorescent or LED lights will minimize cab weight creating more opportunities for cab creativity.

Steel White Painted Canopy
1 down light per panel

Eleclip Ceiling

Our drop ceiling has been designed to be just as light and easy to install as our panel system.

The frame itself typically weighs less than 40 lbs and was designed to be installed by just two people. The most eye catching feature of it is the patented roll away tiles. That feature sets us apart from the competition by allowing the exit door to be located anywhere but in the center of the cab front to back.

It is a system of ceiling tiles assembled together to form a tray that once unlocked can be slid off the clip hooks and rolled away exposing one entire half of the canopy. This new technology is both cutting edge and extremely practical.

All ELECLIP drop ceilings come equipped with LED lighting for a clean, bright look that will last.

Cab Handrails

Offering a larger variety of standard and custom handrails.

With a larger variety of handrails to choose from, Concept Elevator provides the exact look you need to customize or renovate your elevator cab. Our elevator handrails can be pre-engineered or specified to any existing elevator interior. We offer several shapes, sizes and styles. For example, a round or solid flat handrail with return ends in a stainless steel, brass alloy or oxidized bronze finish. We custom make our handrails to fit any preference.

Round Handrails
1 1/2" Diameter

Flat Handrails
3/8" x 2" Flat Bar

Round Handrails Return
1 1/2" Diameter

Flat Handrails Return
3/8" x 2" Flat Bar

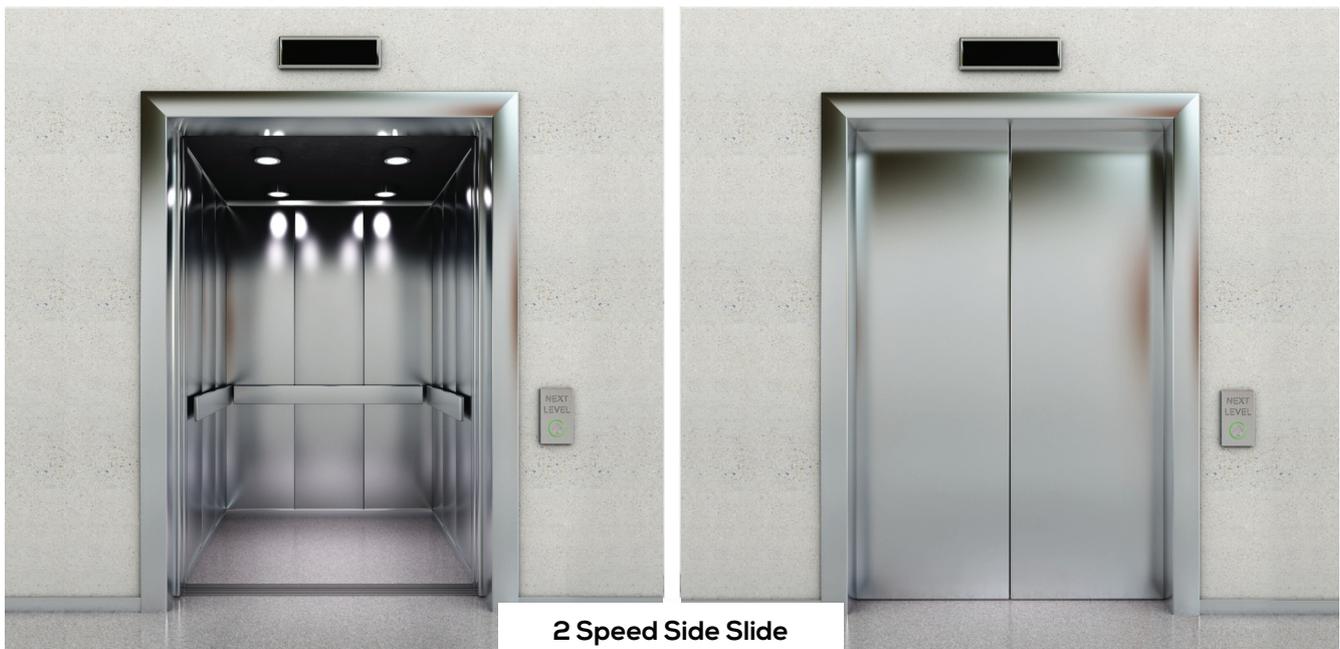

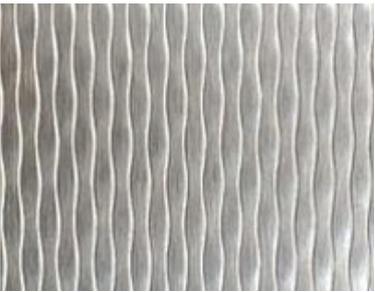

Bumper Rail
1/4" x 6" Bumper Rail

Entrances

Entrance assemblies are available in various types, sizes and finishes. We can provide UL labels for entrance up to 10' wide and 10' tall. Transoms are also available in both flush and offset design.

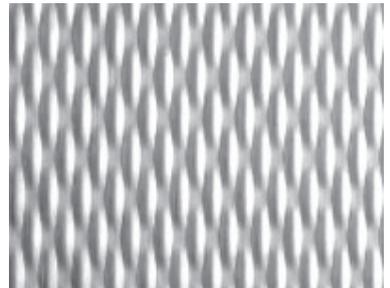

Entrance frames can be either bolted or mitered and welded. Various wall construction and thickness can be accommodated. Common finishes include baked enamel, stainless steel and bronze muntz.

Finishes

Laminates &
Custom Metals

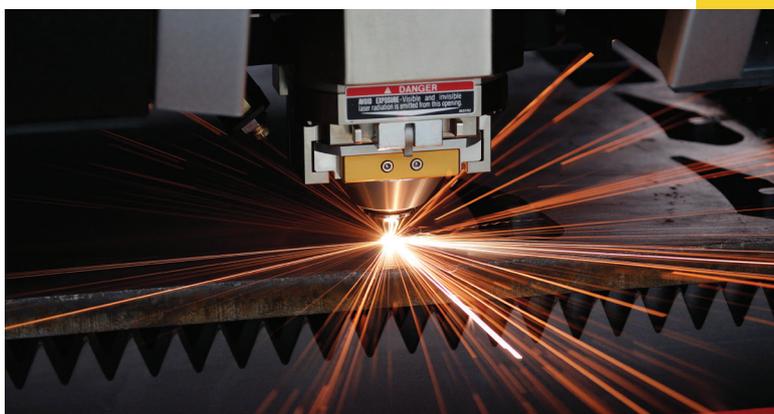

Machinery

V- Groove Machine

This is a precision cutting machine that cuts a V-groove for a tighter radius bend and crisp clean edge. This allows us to provide designs that very few can match.

**Example above*

Precision Fiber Laser Technology

Fiber laser technology allows us to cut various thickness of metals into precision pieces with clean edges and perfect lines. The details and designs are only limited by our imagination.

CNC Router

The CNC router is a precision cutting machine. It accurately cuts materials to various sizes and shapes with flawless lines. With computer accuracy and multiple tool heads it can form materials into clean precise panels.

Over 15 years of elevator cab manufacturing experience.

Concept Elevator has been operating on the principles of honesty, reliability, and personal service since we built our first cab in 2003.
